Securing Keys, Assets & People

AssetTracer-Locker-v2-header-email2.png

Secure Radios, Long Guns, Tasers, Body Cams, Laptops, Opioid Kits and Much... Much More.

Police and Law Enforcement Officers rely on a wide range of equipment to complete their every day job. Aside from relying on firearms and safety equipment, you deal with evidence, narcotics, and many objects that have unique storage requirements. At the same time, you need to ensure the security, safety, accountability and reliability of all weapons, communication devices, and items of interest that come through the front door.

This is where AssetTracer Smart Locker systems excel.

AssetTracer gives you the tools that provide accountability and help better manage assets, keep essential electronics charged and ready to use, and to maintain proper chain of custody for evidence.

Keep Your Devices Charged

The software will only release devices once they have been fully charged via the charging bays in each compartment. This means greater efficiencies for your staff that will never have to use a half-charged device.

Advanced Smart Terminal

Keep your staff accountable. Maintain an audit trail of every action made on the locker. Schedule and restrict access for certain times, certain users, and when certain conditions are met. Monitor charge level and record error codes related to a device. Automatically open support tickets if a device is malfunctioning.

Locker Modules-409859-edited.jpg

Modular Design

Combine a range of stackable locker modules, including compartments sized for 2-Way Radios, Long Guns, Laptops, Firearms, or large-sized items and tools. Customize and choose the exact system you need.

Multiple Authentication Options

Authenticate users through Smart Terminal combined with access cards, IrisID, facial recognition, fingerprint, and multi-factor authentication. Assign locker access to individual personnel, whole teams, or by job type.

Blog:

7 Reasons Why Law Enforcement Offices Are Using Electronic Lockers

Learn how the improved visibility and automation of an electronic locker system has given law officials the ability to fight back against criminals. With the ability to better track and control a large number of restricted items--and with better tools to control these items--we have greater capability to ensure they remain locked up and out of the wrong hands.
